### **Remote Meeting Attendance Instructions**

In accordance with Governor Pritzker's Executive Orders allowing for remote attendance at meetings, the Village of Oswego is encouraging social distancing and allowing remote attendance at Village Board meetings. Remote participation for elected officials, staff, and the public is expected to continue until the order is lifted.

The Village of Oswego will hold its regularly scheduled Committee of the Whole and Village Board meetings on Tuesday, Jun 9<sup>th</sup> with elected officials, staff, and the public participating remotely in compliance with the State's requirements. The Committee of the Whole will begin at 6 p.m. with the Regular Village Board meeting beginning at 7 p.m. (or immediately following the Committee of the Whole meeting). Village Hall will be open for the meeting; however, residents are strongly encouraged to watch or participate remotely. Here's how:

#### **How to watch or join the meetings from home:**

- Watch the livestream at [www.oswegoil.org/government/village-board/agendas.aspx](http://www.oswegoil.org/government/village-board/agendas.aspx). Scroll down to Upcoming Events. Once the meeting begins, an *In Progress* link will appear. Click on it to watch the meeting. You will see the elected officials, staff members, and other participants who are attending in person at Village Hall.
- Watch the webinar live at [StreamUS.oswegoil.org](http://StreamUS.oswegoil.org). You will see the elected officials, staff members, and other participants who are attending remotely. If you access the video webinar on a smart phone, you will be prompted to download the Zoom app.
- Join our meeting by phone call. Call (312) 626-6799 just prior to the meeting. When prompted, enter passcode **508 193 215** from your phone. You will hear the audio of the meeting through our webinar service.

#### **To give a comment at the meetings, you have multiple options:**

- Email your comment to [publiccomment@oswegoil.org](mailto:publiccomment@oswegoil.org) by 4 p.m. on the day of the meeting. Your comment will be read aloud during the Public Forum portion of the Village Board meeting by a Village staff member. Please indicate, in the subject line of your email, what meeting body you would like your comments to be read aloud at. For example: "Public Comment for Village Board Meeting". The entire content of your written comments will be subject to public release. The Village of Oswego is under no obligation to redact any information.
- Give your comment live by phone. Email [publiccomment@oswegoil.org](mailto:publiccomment@oswegoil.org) or call 630-554-3259 by 4 p.m. on the day of the meeting and leave your name, address, phone number, and the topic on which you'd like to speak. Our staff will call you during the meeting and will put you on speakerphone so that you can give your comment live. Please be by your phone when the meeting begins at 7 p.m. We will let the line ring four times before moving onto the next speaker.
- You may also still give public comment in person. Residents are strongly encouraged to stay home and participate remotely, however, they may also attend the meeting in person. If

attending, members of the public are required to stay six feet from any other person in the room and wear a face covering/mask.

As always, those giving public comment are asked to fill out the Public Participation form and abide by the Village's civility code, which is available on the Village's [website](#).

**Get updates as they happen**

Residents are also encouraged to follow the Village of Oswego on Facebook (@VillageofOswego) and Twitter (@OswegoIL60543) for up to the minute updates. You can also subscribe to Village of Oswego emails by visiting <http://www.oswegoil.org/> and clicking on E-mail Alerts.

**AGENDA ITEM**

**MEETING TYPE:** Committee of the Whole

**MEETING DATE:** June 9, 2020

**SUBJECT:** Entertainment Venue Design Discussion

**ACTION REQUESTED:**

Discuss the Entertainment Venue Design Process

**BOARD/COMMISSION REVIEW:**

N/A

**ACTION PREVIOUSLY TAKEN:**

Date of Action	Meeting Type	Action Taken
1/14/20	Village Board	Passed Resolution 20-R-7 approving a contract with Schoppe Design
4/21/2020	Village Board	Passed Resolution 20-R-34 approving a contract with Williams Architects

**DEPARTMENT:** Administration

**SUBMITTED BY:** Dan Di Santo, Village Administrator

**FISCAL IMPACT:**

FY 21 Budget includes \$750,000 in the Capital Improvement Plan for the entertainment venue project.

**BACKGROUND:**

On October 1, 2019, the Village Board approved Resolution 19-R-72, approving an agreement to accept the donation of ~3 acres of property at Lot 7 in Oswego Junction Phase 2. The donation agreement requires the Village to develop “a venue for outdoor live performance and music entertainment and events to be enjoyed by the public” on the site within 3 years. Since that time the Village entered into contracts with Schoppe Design for land planning, Threshold Acoustics for an acoustical study, and Williams Architects for architectural and engineering design. In addition, the Village conducted an online community survey to identify opinions on how the entertainment venue should be used and conducted stakeholder interviews. The purpose of this agenda item is to

provide direction on the project design, discuss community feedback, review the acoustical engineer report, and to review the project schedule.

## **DISCUSSION:**

### Community Survey

A community survey on the entertainment venue site was live on the Village website from February 7, 2020 through April 22, 2020. In total, 495 respondents completed the survey, 90% of which self-identified as Oswego residents. Attached please find a summary of the results put together by Planner Natalie Zine. The key takeaways from the survey include:

- 60% had been to an outdoor venue in a neighboring suburb in the past year;
- 75% are likely to attend a community festival in a given year;
- 56% are would like to see more music performances readily available in the area; and
- 41% are satisfied with the current offering of events and performances in the Village.

### Stakeholder Input

Staff and Schoppe Design conducted stakeholder interviews with School District 308, Oswegoland Park District, a local concert promotor, a local dance troupe, and a local performing arts group to discuss their potential use and ideal design of the entertainment venue. Attached are the notes from those meetings. Key highlights include:

- There should be room behind the stage for performer vehicles and changing;
- The service drive should be able to handle tour buses and semi-trucks;
- The stage should be a minimum 40' x 32' and up to 52' x 37';
- The stage should have ADA accessible ramps;
- Rigging for lighting and sound should be included;
- Separate power sources for audio and other uses are necessary; and
- Basic "house" lights and audio are ideal.

### Acoustical Report

Following Board direction, staff hired acoustical engineer Threshold Acoustics to perform an analysis on the sound impacts of the proposed entertainment venue (attached). The report looked at different orientations to face the stage and finds that due to the existing berming and separation from neighborhoods from the BNSF railroad tracks, detention pond, and the Orchard Road bridge, amplified sound typical of a concert and entertainment venue will not result in decibel levels that exceed our code requirements at residential neighborhoods (60dBA during the day, and 55dBA at night). Williams Architects further state that the effects shown in the report can be lessened even further by incorporating some absorptive materials in the back wall of the stage structure.

### Site Plan

Over the past several months, Mayor Parlier and staff have worked with Schoppe Design and our stakeholders to establish a draft master site plan (attached). The site plan includes many desired design elements of the group:

- Northeast stage orientation to take advantage of existing sound barriers and to maximize the crowd area;
- Area designated for food trucks;

- Area designated for future playground;
- Walking paths, overlooks, and aerators to use the pond as an amenity;
- “Front of House” pad for audio technician;
- Wide service corridor for trucks and equipment;
- Future support building for public restrooms and concessions;
- Entry court; and
- Walking path.

Important to note is that all of these features are not planned for the initial phase of the development. The \$750,000 budget includes design and construction for a covered stage, parklike area, and the service corridor. All other design elements in the master plan would come during later stages when additional funds are available. Worth noting is that the Village applied for a \$750,000 Fast-Track grant through the State of Illinois for this project. If received, these funds would make it possible for the Village to move up some of the later-phase design elements such as restrooms/storage behind the stage or the support building for public restrooms/concessions.

During the Committee of the Whole discussion Schoppe Design will be available to answer questions on the draft master site plan.

#### Stage Design

Based on initial feedback from discussions at Village Board meetings, stakeholder meetings, and steering team meetings, Williams Architects presents the attached 5 Design Options for Village Board consideration during the Committee of the Whole discussion. We are not looking for the Village Board to make a decision on the preferred design during the meeting, rather we are looking for overall pros and cons, questions and comments on each option. Williams Architects present these options during the Village Board meeting.

#### Project Schedule

Below is the project schedule that we are currently working from. The current timeline to have the venue completed by May 2021 is tight due to COVID-19 related setbacks. To meet this schedule, site grading and planting would have to take place this fall. Any further setbacks would result in planting in the spring and opening of the venue in the late summer/early fall of 2021.

- Public Open House (Summer, 2020)
- Planning and Zoning Commission (July 9, 2020)
- Village Board Direction to Bid (August 4, 2020)
- Construction Documents (August 6, 2020)
- Bidding (August 13, 2020 – September 8, 2020)
- Award of Construction Contract (September 15, 2020)
- Construction (October 1, 2020 – May 15, 2021)

The public open house this summer will obviously be impacted by COVID-19. No date is set, but the steering team discussed a few options to consider. The current plan is to hold an open house in the lobby of Village Hall following social distancing and gathering recommendations from the Illinois Department of Health (IDPH) and the Centers for Disease Control and Prevention (CDC).

Consultants and staff would be stationed in the lobby of Village Hall next to boards displaying the information provided herein. Public capacity at one time in the lobby would be limited to IDPH guidelines (10 or less in Phase 3, 50 or less in Phase 4), with one-in-one-out if the room is at capacity. To supplement the open house, Williams Architects is also creating an online tool to gauge resident input on the designs electronically.

**RECOMMENDATION:**

Discuss the entertainment venue design process with Williams Architects.

**SUBJECT:** **Amphitheater Park Survey Results Summary**

**Background**

A Survey Monkey survey was created to gain preliminary input from the public regarding the proposed amphitheater and park on the 3-acre property generally located west of the Park-n-Ride lot, south of the train tracks.

The survey was posted on the Village of Oswego’s website, on the Go Oswego website, and on the Village Facebook page for approximately 3 months to allow for maximum participation. The survey received a total of 495 responses. Approximately 90% of these responses were from Oswego residents (zip code 60543), 6% from Montgomery residents (zip code 60538), with the remainder from other or no response.

**Analysis**

The following information provides a summary of the key data results from the Amphitheater survey. To review the comprehensive data, please see the Survey Monkey Data Analysis attached.

Key take-aways:

- When asked what type of venues they’ve attended performances at in the past year, the majority of respondents (60%) said they’d been to an outdoor venue in a neighboring suburb. (Q1)
  - This was closely followed by an indoor Chicago venue (55%); an outdoor Chicago venue (48%); an indoor venue in a neighboring suburb (47%); an Oswego school facility (46%); and an Oswegoland Park District facility (45%).
- When asked how likely they are to attend various types of performances in any given year, most respondents (75%) said were likely or very likely to attend a community festival. (Q2)
  - This was closely followed by national acts at a large venue (67%) and regional performances at a local venue (63%). Table 1 below summarizes the results.

**Table 1: Likeliness to Attend Various Events**

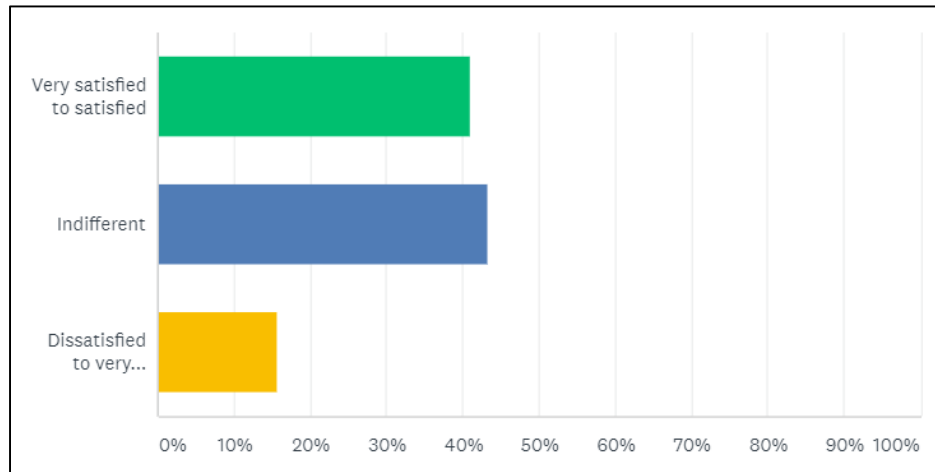

TYPE OF PERFORMANCE	LIKELY - VERY LIKELY	SOMEWHAT LIKELY	UNLIKELY - VERY UNLIKELY
Community festival	75.15%	15.56%	9.29%
National act/concert at a large venue or pavilion	67.27%	16.97%	15.76%
Regional performance at a local venue	62.63%	21.41%	15.96%
A child’s performance at a school, local venue, etc.	51.31%	11.92%	36.77%
Community activity such as movies in the park	42.22%	29.09%	28.69%

- When asked what type of activities, performances, or programming, if any, they would like to see more readily available in the Village of Oswego, the majority of respondents mentioned music, music concerts, live music, etc. (~56%). (Q3)
- When asked how often they would likely attend events, most people said just a few times a year (36%). Table 2 below summarizes the results. (Q4)

**Table 2: Frequency of Future Attendance at Events**

Frequency	
Just a few times a year	36.36%
Once a month	29.49%
A few times a month	27.27%
Every week!	6.87%

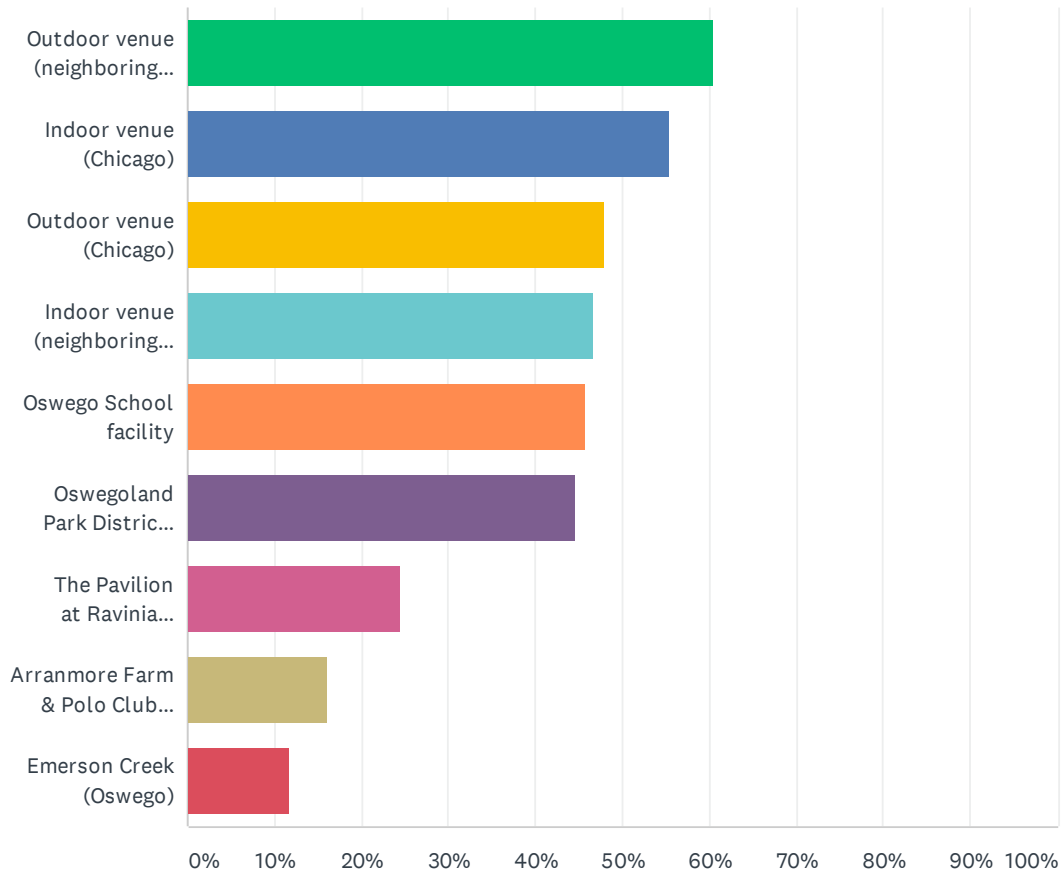

- When asked how satisfied they are with the current offering of events and performances in the Village, most said they were satisfied to very satisfied (41%) or indifferent (43%). (Q5)

- When asked what one thing the Village should consider when designing the amphitheater and/or programming, the most frequently used words were parking and/or “ample parking” (~21%) and seating (~9.5%).

67	Having a summertime outdoor venue with possible something like Wednesdays or Thursdays in the park with local bands/acoustic acts. Try and mix the music up. Beats and Eats is a good concept, but it's too much of the same genre (indie). There's tons of local talent in many different music genres that not only make their own music but cover music as well. Also, other locals such as Romeoville and Bolingbrook has more full bands on the weekends, both local and smaller national acts. 90	All type of music. Modern, big band, marching band, orchestra, ethnic music & dance. Check out Naperville & Plainfield they seem to do a good job with music, art, dance activities. I would love to see downtown Oswego update like the quaint downtown Plainfield. Enough of the antiques stores!!!! Wine & cheese shops where you could purchase & take home or sit & sip. Quaint not big name restaurants. Variety of ethnic foods. Mediterranean. Fresh food stores such as Pete's, Trader Joe's.	2/9/2020 10:55 AM

249	None involving the proposed amphitheater. There's already too much to compete with in the area. Aurora is right next door and has River's Edge and the Paramount. Invest in Oswego in other ways - more businesses, help 308, get a Costco (I had lunch with the mayor of Naperville this week - their first Costco brings in more sales tax than the entire downtown business district COMBINED), get the Metra station locked in.	2/7/2020 6:58 PM

10	build it like the outdoor venue in aurora	2/29/2020 2:57 PM
11	Food, drink-(beer & wine), and restroom facilities for all.	2/22/2020 10:16 PM
12	Have the State of the Village at the amphitheater. Also encourage fox valley players, YPAC, school performing arts and other local acts to perform here.	2/21/2020 9:13 PM
13	Accessibility to all is key for all members (young/old/disabled/etc.) of the community to enjoy.	2/19/2020 3:49 PM
14	A combination of seats and lawn areas with varying price points. Food and drink variety that is somewhat unique (craft beers, seltzers, wines and food other than hot dogs and hamburgers.) Easy access in and out will be important as well.	2/19/2020 12:43 PM
15	live music	2/18/2020 1:05 PM
16	Traffic flow in/out	2/17/2020 6:28 AM
17	Easy and ample parking	2/16/2020 4:44 PM
18	Don't do it	2/16/2020 2:22 PM
19	Noise control! We live just blocks from the proposed site. While I understand the potential positive impacts of a venue, I do not want concerts and traffic noise past 10:00pm. This would negatively impact our neighborhood and home values.	2/16/2020 10:46 AM

24	Covered pavilion and seating areas in case of inclement weather. Adequate free parking	2/13/2020 10:22 PM
25	none	2/13/2020 9:25 PM
26	I thing the Village spending tax dollars on this venue is a HUGE waste of money with little ROI. We should be laser focused on economic development that generates revenue in the form of tax generating businesses. Horrible waste of funds	2/13/2020 6:24 PM
27	restrooms and space for food vendors	2/13/2020 1:33 PM

35	Parking and security to surrounding residents.	2/12/2020 11:01 PM
36	...	2/12/2020 3:46 PM
37	- Adequate parking - Adequate entry and exit without major traffic jams - Cutoff time for alcohol service - Both lawn and pavilion seating - Reasonable prices for food, water, beer, etc., which can sometimes spike at these events and venues - Have reasonable security/crowd control - Price tickets so village residents want to go and can go (e.g. \$50 or higher may start to keep some people away)	2/12/2020 9:26 AM
38	Ample parking	2/12/2020 5:47 AM
39	Consider the location! The proposed area is right next to a daycare. The noise probably won't be an issue during the day but the trash that people will leave behind will be. Also there are events held after school hours and parking is already very limited	2/11/2020 10:00 PM
40	people with disabilities... i have a bad knee. parking closer to venue and seating	2/11/2020 7:25 PM

53	?	2/10/2020 12:50 PM
54	The village needs to explain how this will be paid for and funded on going along with how it will be managed on going and who will be in charge of it - the village or an outside firm? There are many unanswered questions about this project yet the village has started this project and has already spent money on it before it asked any input on the project from the community. This survey does not ask any questions or input on the funding of this project which is surprising considering the platform the 4 new members of the board ran on to get elected. There are many questions about the legal agreement and donor of the property that has not been fully transparent to the community. I believe the village is moving too fast on this project and it is one that is clearly not a necessity for the community over many other pressing needs. Why has this become such a significant focus by the village board? Many questions to be asked and many answers still pending. David Edelman. 630-308-1791.	2/10/2020 11:29 AM

57	Parking	2/10/2020 10:54 AM
58	Noise and parking. I live in Gates Creek West and I am concerned about noise levels and parking. When Prohibition Junction has the military fest in August, we can hear the noise at our house. I'm also concerned that there isn't enough parking where the venue is.	2/10/2020 10:22 AM

60	I think there should be something relating to the history of the town Oswego, or the history of arts in Oswego.	2/10/2020 9:39 AM
61	Extreme noise and undesirable activity (drinking etc.) a accompanying this venue.	2/10/2020 9:24 AM
62	Don't do it	2/10/2020 9:23 AM
63	easy access in/out for traffic flow	2/10/2020 9:19 AM
64	Consider 'open seating' and not reserved seating. This was part of the charm for Riveredge and then they incorporated reserved seating. Very disappointing. Also consider beer/wine sales and allowing guests to bring coolers (no alcohol) with snacks/water.	2/10/2020 9:09 AM
65	Dog friendly section.	2/10/2020 8:50 AM
66	Lawn seating with fixed seating so maybe we can hold the graduations for the high schools at the venue.	2/10/2020 7:27 AM
67	Again, I think a site that has both indoor and outdoor capabilities would be nice. As for programming, the sky is the limit!	2/10/2020 7:10 AM
68	not sure	2/10/2020 7:06 AM

75	Proximity to the Gates Creek West neighborhood. Which direction will the pavilion face? How will you incorporate the train horn into performances? Or will you petition for a no blow zone? Can residents within listening distance get in on comp tickets or should we just listen from our yards?	2/9/2020 9:37 PM
76	Parking and a great sound system. Seating could be mixed with a cheaper Lawn option to save on costs.	2/9/2020 8:19 PM

337	I'm not going to answer the question directly, but use this space to provide my 2 cents. I appreciate the donation of land but don't think this is the best use of funds at this point. If we want a community bandshell, get a mobile one (look at Glen Ellyn) that can be located throughout the community. I think there would be little use in general, I think the location is less than ideal (do we have land near Village Hall that can be utilized...already have parking, the fountain, restrooms?), and would be concerned with train noise being an annoyance to music events.	2/7/2020 3:12 PM

362	Consider the original cost of constructing the facility and the ongoing cost of maintaining the facility...i.e., police presence, clean up crews, electricity, etc. versus do we really need such a facility. Consider which way it is facing (sun / most common wind) You really need to consider the growth in Oswego and around because what you build now, might be too small for the future. If a train station is going to be by this area, A LOT of people could come here often for larger events. Look at Goo Goo Dolls at Aranmorre - - a lot of people were there; if you want that type of attendance, you need to think big and you need to bring people in that have those types of events for advice (the end users). If that is not what the goal is, then make sure this venue is setup to handle all types of activities/the arts.	2/7/2020 1:43 PM

418	For adults, I think a "beer garden" featuring local breweries/distilleries (Oswego Brewing Co., Two brothers, Solumn Oath, Black Dog, etc.) would be appealing. Trees and other covered spaces may be ideal for hot days and inclement weather. Electric vehicle charging stations (such as ChargePoint) would offer opportunities for additional visitors even on non-event days. The costs for the stations can be offset by charging for usage or by allowing a sponsor to fund either the station or electricity in exchange for advertising.	2/7/2020 1:38 PM

## **Oswego Entertainment Venue Key Stakeholder Site Plan Input**

### Concert Promoter

- Beer tent area is ideally near the stage
- Food truck area should be easily seen by the venue entrance
- Food trucks should include space to service them from behind
- Back of stage area should have room for loading/storage, temporary dressing rooms, and potentially band parking for cars (up to 4 spaces) that could be on gravel
- The service drive should be designed to handle tour buses and ideally semi-trucks
- Playground should be moved or protected from the nearby road
- Site should be designed keeping in mind that fencing will be used during paid events
- The audio 'front of house' pit should ideally be planned 100' from the stage
- The 'front of house' area ideally is 24' x 24' on solid surface, but that's probably larger than we need
- Stage is ideally 40' x 40' to handle big shows. Can do 40' wide x 32' deep too
- Roof should be 16' – 20' tall
- Stage should be minimum 3' above grade, 4' is even better for big bands but probably more than we need
- Public and performer restrooms ideally separate

### Dance Troupe

- Ideal stage size of 30' x 30'
- Estimated attendance of 400 – 1,000
- Space for tents for wardrobe changing behind stage
- 5' 'safety zone' in front of the stage
- Room for equipment trailer
- Stage should be accessible
- Public and performer restrooms ideally separate

### Park District

- Recommend visual sight line from the concert seating area to the playground
- Recommend restroom facilities
- Consider evacuation routes
- You will need more on-site storage than you think

### School District

- Consider ADA accessibility – ramping is ideal to bring percussion and equipment on stage, not stairs/lifts
- Include area for storage
- Plan for expansion
- School stages are 52' x 37'
- Ensemble groups get as large as 60 musicians, most groups that would use this would be smaller ensembles
- Choirs would need room for risers
- Consider an orchestra pit in front of stage for theater

## **Oswego Entertainment Venue Key Stakeholder Stage Design Input**

### Concert Promoter

- Loading and rigging hanging points are very important
  - Unistrut or rigging bars
  - Need front, middle, and rear rigging
  - 2 main audio hanging points, 2,500 lb rating for each point, 6' long each for main speakers
  - Lighting needs 1,500 lb points
  - Roof should overhang stage so lighting can point back at the lead singer
- Ample power is very important
  - Separate ground service for audio
  - 3 220's at the stage area for (1) audio, (2) lighting, and (3) services
  - Power by food vendors
- Should be basic "house lights"
- Should be basic "house audio" to plug into

### Dance Troupe

- Ability to plug-in spotlight and lighting projection system
- Stage shouldn't give splinters (if wood)

### Park District

- Power and running water accessible to stage
- WiFi connection

### School District

- Lighting: 400 amp/3 phase, independent from audio
- Audio: 200 amp/3 phase, independent from lighting
- Permanent stage tormentors installed with track system
- Stage should be able to hold risers

### Performing Arts Group

- Basic in-house stage lighting
- Basic in-house PA system
- Changing room that is not visible from the crowd

# Oswego Amphitheater

## Acoustical Evaluation of Site

Prepared for Village of Oswego  
2 June 2020

### Introduction

This report presents our findings and preliminary recommendations for the acoustical evaluation of an amphitheater site for the Village of Oswego, IL. Our report is based on information received during our 11 February 2020 meeting with the Village, subsequent site visit and acoustical modeling. Within this report is an evaluation of existing site and adjacent topography for concert sound propagation, sound system modeling methodology, investigation of two stage siting options, potential siting improvements and an appendix summarizing our comparison of the existing Village noise ordinance to other municipalities.

### Executive Summary

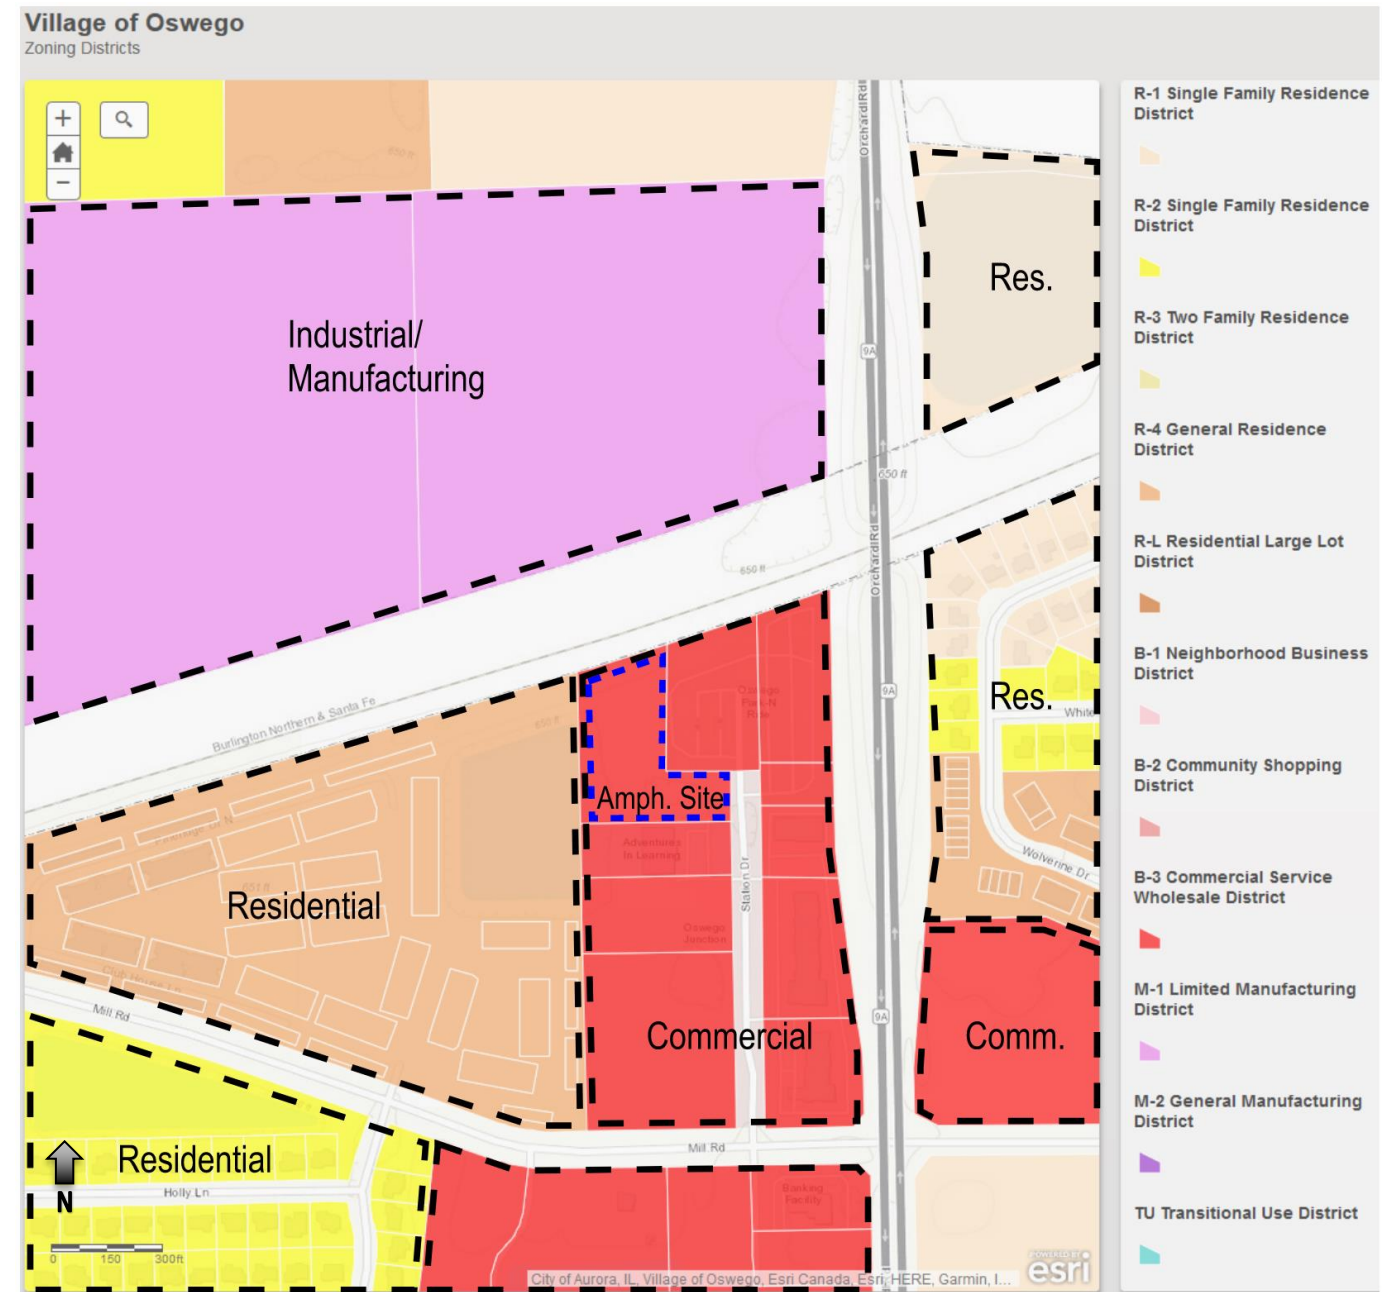

The proposed site for an amphitheater serving the Village of Oswego provides some beneficial features for limiting or buffering concert sound to adjacent residential zones including a berm to the north, elevated Orchard Rd to the east and a retention basin to the west. Concert sound beyond the footprint of the site is inevitable, particularly drum and bass sounds that cannot be as easily focused on the audience as the rest of the sound spectrum. Although not typically enforced for community concerts, the Village of Oswego Noise Ordinance is comparable to many others in Illinois and around the US.

### Site

The site reviewed in this report is Lot 7 in the Oswego Junction Phase 2, northwest of the Orchard Rd and Mill Rd intersection. The site is bound at the north by the BNSF rail line, at the east by a Park-N-Ride lot, at the south by a daycare, and at the west by a retention basin.

### Zoning

The amphitheater site is zoned B-3 Commercial with unbuilt R-4 Residential immediately west beyond the pond, M-1 Manufacturing to the north beyond the BNSF line, and B-3 Commercial continuing immediately east with residential zoning beyond Orchard Rd. Commercial zoning continues southward beyond Mill Rd.

### Municipality Noise Ordinance

A municipality noise ordinance does not typically apply to special events but is useful for comparison as a baseline. Indeed, the Village of Oswego Code includes an exemption<sup>1</sup> for "community events sanctioned or sponsored in whole or in part by local governments, schools or charitable or service organizations."

The Village noise ordinance limits noise to receiving residential property lines to 60 dBA during daytime hours (7:00am-10:00pm) and 55 dBA during nighttime hours (10:00pm-7:00am). The ordinance is not limited to the nearest residential

<sup>1</sup> Village of Oswego Code, Title 6 (Police), Chapter 10 (Noise Control Regulations), 6-10-6(D)

property, but any property reached by the noise source. The ordinance states that the measurement is to be performed at the property line. The Village noise ordinance does not apply to receiving commercial or industrial/manufacturing properties.

See the appendix at the end of this report for further discussion of the Village of Oswego Noise Ordinance.

### Site Features

Several geographic features are of note at the amphitheater site:

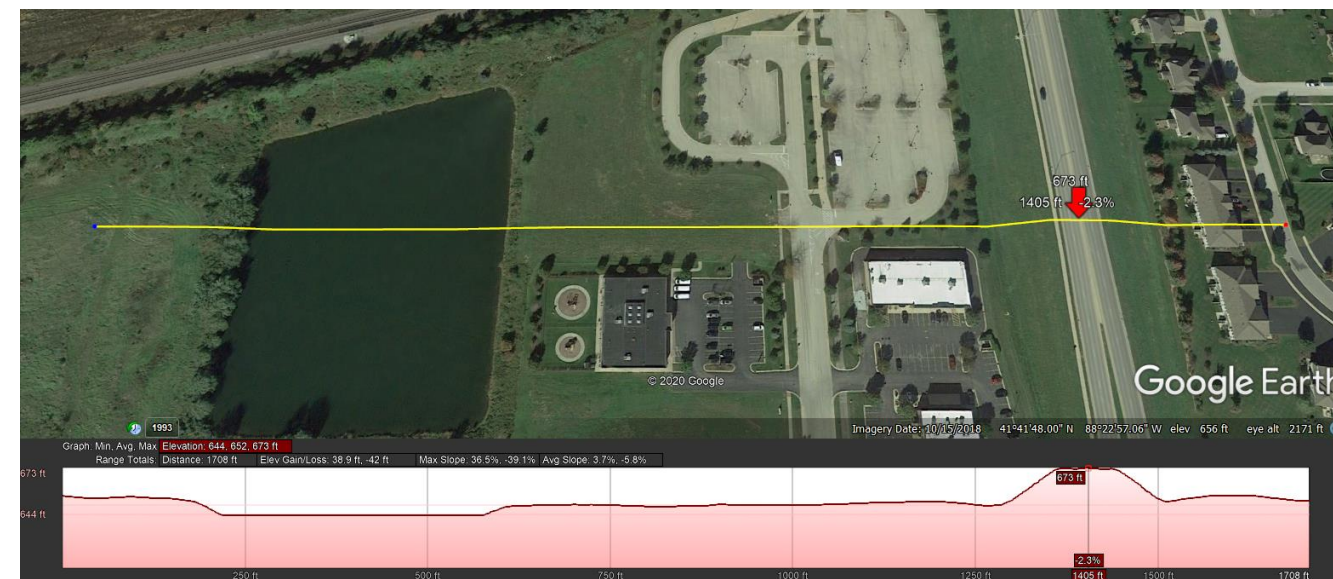

1. The retention basin at the west provides 400 ft of buffer to the nearest future residential receiving property line. An important property of noise is its natural reduction in energy over distance. Specifically, the sound level of a source decreases by 6 dB for every doubling of distance. If sound is measured at 25 ft from an amphitheater loudspeaker at 90 dBA, at 50 ft distance it will measure 84 dBA, then 78 dBA at 100 ft distance. Two more doublings will occur before the full 400 ft width of the retention basin resulting in a 66 dBA measurement. Another 6 dB reduction will not occur until another doubling, 800 ft away from the loudspeaker. This example shows the importance of buffer space around the venue and diminishing returns far beyond.

2. A berm exists at the north boundary along the BNSF line boundary, tapering northeastward. The berm is approximately 20 ft tall, compared to the present grade at the site. Loudspeakers are anticipated to be located at the south end of the property facing northward with additional loudspeakers on poles serving distant audience areas. These loudspeakers will be mounted high and be sufficiently tilted down to serve their particular audience zone, but there will be inevitably be intelligible sound served beyond the intended coverage area. The berm will serve to backstop some of this intelligible sound, although the BNSF railway provides additional buffer to the manufacturing zoned property to the north.

The distinction of "intelligible" sound is important. Mid-and high frequencies include the melodic content of music and components of speech that make it intelligible. Low frequency sounds, such as kick drum, bass and similar instruments do not behave similarly. Low frequency energy emanates in all directions from loudspeakers and is not easily controllable. This energy will pass over the berm and all directions rather equally. The sound reduction over distance as described previously will be the primary means to dissipate this bass energy. This is a common experience in outdoor venues, with bass audible in the distance without much discernable melody until one approaches within a couple hundred feet of the venue.

We should note that the vegetation on the berm provides little to no additional benefit.

3. Eastward is the adjacent Park-N-Ride lot, Orchard Rd at 400 ft distance, then residences on Wolverine Dr whose property line is 100 ft from the center of Orchard Rd, or a total of 500 ft from the edge of amphitheater site. The grade of Orchard Rd itself acts as a berm, rising to overpass the BNSF line. In the elevation cut below, Orchard Rd grade is 20 ft above both amphitheater and property line grade, increasing to 30 ft where parallel to the north boundary of the amphitheater site. Orchard Rd breaks line-of-sight to the amphitheater, which is the first requirement to reduce mid- and high-frequency melodic content.

Traffic on Orchard Rd itself is a dominant noise source to adjacent residences. Using a statistical model of traffic noise, we can predict the amount of noise experienced by the residences based on the 17,700 vehicles per day count for this section of road. Results are in the following table.

**Table 1.** Statistical analysis of vehicular traffic noise to adjacent residential property lines, 17,700 vehicles/day

DESCRIPTOR	LOUDEST HOUR	QUIETEST HOUR
L <sub>EQ</sub> , Average across the entire hour	67 dBA	63 dBA
L <sub>10</sub> , Loudest 6 minutes of the hour (10th Percentile)	71 dBA	68 dBA
L <sub>90</sub> , Quietest 6 minutes of the hour (90th Percentile)	58 dBA	52 dBA

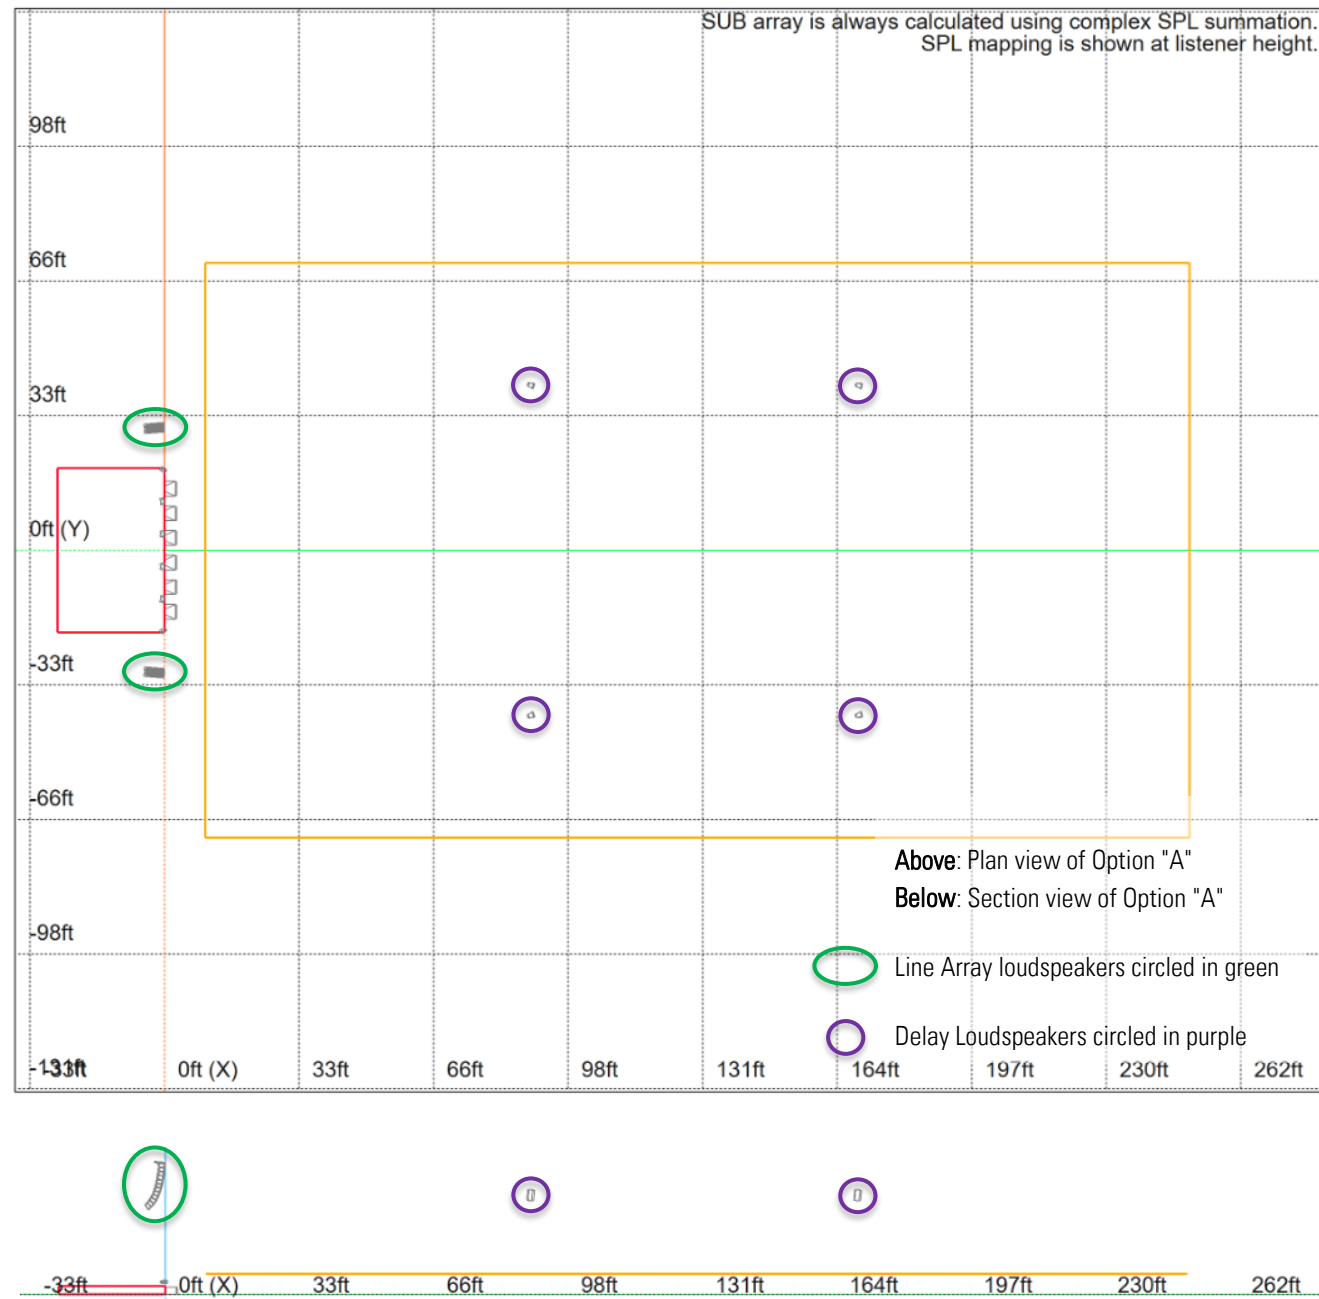

Loudest and quietest minutes are in aggregate across the hour, not consecutive minutes of loud or quiet vehicular activity.

Of course, rail activity on the BNSF line is its own noise source and will rival vehicular traffic nearby. At the nearest residences 100 ft distance from the track, the average locomotive noise level will be between 90 and 95 dBA with subsequent car noise level at 78 dBA. To be clear, these levels are per train event based on historical data, rather than the hourly average for vehicular traffic above.

4. Southward to the site are adjacent commercially zoned properties with future residentially zoned properties to the southwest. Little distance attenuation is afforded to these receiving property lines. They are not expected to receive direct mid- and high-frequency energy from the loudspeakers, however they may be directly exposed to various noise sources on stage (drum kit, guitar amplifiers, loudspeakers serving musicians and natural instrument energy) in addition to the sound system. These locations will also be most impacted by the low frequency energy from bass instruments.
5. Noise levels were sampled at the amphitheater site during a weekday morning. Samples averaged between 45 and 50 dBA and included distant car and truck activity, a distant aircraft flyover and a rooftop exhaust fan at a neighboring business. No trains passed by during the time of visit.

## Sound System Modeling

The sound system was modeled using line array sources at stage left and right. Additional loudspeakers are located on poles, approximately every 100 ft to maintain consistent sound level and clarity throughout the seating area. (Recall how sound level decreases most rapidly close to the source, requiring additional loudspeakers to maintain consistent level.) These additional loudspeakers provide controlled dispersion of sound over their zone of coverage to reduce the impact at adjacent properties. See the screenshots below of loudspeaker aiming and cutsheets at the end of this report, representing the models simulated.

A concert level of 80 dBA was used at the point of reference, as it is a common target for live music performances in outdoor amphitheaters. Venues from those in communities to regional venues like Ravinia with an emphasis on family programming, folk, jazz, and other musical genres are regularly performed at these loudness levels. While we expect our assumption is reasonable, the concert performance sound level will ultimately depend on the Village of Oswego's intended use of the venue and target audience.

## Stage Siting Options

Two stage orientations were evaluated for noise impacts to adjacent properties.

Option "1" orients the stage near and parallel with the south property line, playing into the depth northward. This option optimizes for playing into the berm to the north, with the industrial/manufacturing zone beyond.

Noise Map A at the end of this report presents a simulated live band concert of pop, rock or metal instrumentation. The sound system is modeled to produce 80 dBA sound in the near seating area and 70 dBA sound in the rear half. Wind is modeled from the south at 10 mph. From these results we can make the following observations:

- Noise impact to the eastern residences are diminished by the elevated grade of Orchard Rd. Noise varies between cyan and unreported, indicating an approximate 55 dBA value. These sound level values rival the quietest 6 minutes every hour of traffic noise on Orchard Rd, ranging between 52 and 58 dBA between the quietest and loudest hours respectively. This is not to say concert noise will not be inaudible. Because the sound content is different (music vs. traffic) a resident may be able to hear concert noise, particularly bass and drum in the presence of traffic noise but will unlikely be able to consistently follow along with the melody.
- Elsewhere on the fringe of cyan, concert noise will be of similar level, predominantly bass and drum south of the venue. The concert sound will be more audible without the presence of road noise in the immediate vicinity.

The venue design team will need to evaluate this condition for sun path among a variety of other considerations for siting the venue.

Option "2" places the stage in the southwest corner, oriented northeast to optimize the property for maximum capacity by engaging the southeast leg of the site. Four more additional loudspeakers on poles cover zones within the southeast region. We can make the following observations for this condition:

- Noise impact to the eastern residences is similar to Option “1”, lower than 55 dBA at the property line. The majority of concert sound is lower in level than traffic noise on Orchard Rd but is more apparent during periods of a traffic lull.
- Noise impact to the future western residences beyond the retention basin is slightly less, though not meaningfully. Future residences to the southwest are slightly more impacted in this orientation. Neighboring south and west properties benefit from an enclosed band shell.

- Noise Map E with the Option 2 stage configuration as an open air venue, resulting in additional noise impact to neighbors from west to south.
- Noise Map F shows the effect of turning off the delay loudspeakers poles within the audience area, compared to Map B. Community impact is negligible. Affected lawn area received lower sound levels than near stage.
- Noise Map G is comparative to Map “E” with map encompassing full extents of 55 dBA levels to surrounding community. Slightly more impact north of railroad tracks.

### Potential Siting Improvements

Further improvements to the site are limited. The existing berm at the north is beneficial and could be extended further eastward to reduce exposure beyond the BNSF line, should the area be rezoned for residential use. A similar berm south of the retention basin is likely of limited benefit because the concert noise will primarily be bass energy which will easily pass over the berm or around the end of it at the existing daycare property. Depressing the stage to grade elevation where the first stretch of lawn seating would be below surrounding grade was investigated with minimal improvement.

The amphitheater stage design should include a stage enclosure – a ‘band shell’ – that at a minimum provides a solid upstage wall and a roof or canopy and might still further incorporate flared side walls to further reduce the spillage of sound – from drum kits, guitar cabinets, monitor loudspeakers serving the performers, and similar sources – onto properties to the east, south, and west. It might also incorporate performance lighting and modest rigging provisions for video. Regardless of these features, it would have the acoustic benefit of helping to reduce disruption to a large swath of adjacent properties behind the amphitheater.

Appropriate sound system design is critical to limit noise to the surrounding environment. The project sound system designer should consider the following strategies:

1. Reduce the need for the main loudspeakers at the stage to cover the entire venue. Instead of attempting to cover the entire audience area from loudspeakers near the stage which tends to spill considerable energy onto adjacent areas, use additional loudspeakers on poles flanking the audience (as simulated for this report) to provide coverage at distant audience zones. These loudspeakers may operate at a lower level and with a defined coverage pattern that limits noise beyond the venue.
2. Employ an optimized subwoofer strategy. Subwoofers produce the low frequency energy that has been discussed extensively in this report as the primary content heard beyond the venue. While subwoofers are typically omnidirectional in nature (radiating sound in all directions) some specific products and general strategies exist to provide directionality, focusing more energy to the venue than the surrounding environment.

Three noise maps are included with various configurations:

- Noise Maps A & B discussed above consider loudspeaker arrays either side of a band shell enclosing the stage for Options 1 & 2 respectively.
- Noise Map C presents the Option 2 main loudspeaker arrays *in front* of the stage enclosure with limited benefit to neighbors toward the southwest.
- Noise Map D with Option 2 loudspeaker arrays *in front of* the stage enclosure improves noise reduction to neighbors toward the south and west.

### Conclusion

The proposed site for an amphitheater serving the Village of Oswego provides some beneficial features for limiting or buffering concert sound to adjacent residential zones including a berm to the north, elevated Orchard Rd to the east and a retention basin to the west. Concert sound beyond the footprint of the site is inevitable, particularly drum and bass sounds that cannot be as easily focused on the audience as the rest of the sound spectrum. Improvements are possible using a fully enclosed stage shell and carefully designed loudspeaker system. Although not typically enforced for community concerts, the Village of Oswego Noise Ordinance is comparable to many others in Illinois and around the US.

## Appendix A - Municipality Noise Ordinance Comparison

The concept of a Municipality Noise Ordinance in the United States begins in government research by the Environmental Protection Agency (EPA) in the 1970s following the Noise Control Act of 1972. The intent was to create a template for communities to adopt balancing the protection of public health and welfare with the technical practicality and economic reasonableness in the community. The primary document drafted by the EPA was the Model Community Noise Ordinance document in 1974.

Recent efforts to revamp these regulations have been undertaken, primarily by an activist organization called the Noise Pollution Clearinghouse. In 2016, this organization presented a paper at the noise control conference Noise-Con distilling 491 community noise ordinances to their primary components. Among the findings were:

1. The most prevalent noise regulatory technique was the "nuisance" standard, present in 85% of the community regulations.
2. Restrictions based on zoning (residential, commercial, industrial) appeared in 65% of the community regulations.
3. Decibel-based (quantifiable) restrictions appeared in 55%.
4. Time-of-day restrictions occurred in 47%.

Among the decibel-based ordinances, the daytime A-weighted residential noise limits ranged from 50 dBA to 85 dBA with a median of 60 dBA. The nighttime A-weighted residential noise limit ranged from 40 dBA to 80 dBA with a median of 50 dBA. Most consider nighttime to begin at 10:00pm.

### *Oswego Noise Ordinance*

The Oswego Noise Ordinance (Title 6, Chapter 10 Noise Control Regulations) employs a decibel-based standard for residentially-zoned receiving properties. The daytime limit is 60 dBA, until 10:00pm where the nighttime limit is 55 dBA. The point of measurement is limited to the property line although the regulation applies to any location within the receiving property.

Both temporary and permanent variance permits are addressed, the former when the noise is necessary to promote public health or welfare, perhaps a generator operating for the public benefit during an outage. Permanent variances are addressed when the cost or other reasons are insurmountable to reduce to code limits.

The ordinance exempts emergency operations, noises required by law (tornado sirens), powered equipment such as lawn mowers and community events. Presumably the proposed amphitheater will normally operate as an exempted event.

### *Area Comparisons*

Chapter 14 of the **Naperville** Code of Ordinances uses daytime and nighttime limits to residential properties that are 5 dB lower than Oswego, 55 dBA and 50 dBA respectively. The ordinance also specifies additional limits for other zoning classifications including Commercial, Light Industrial and Industrial. Furthermore, the ordinance requires measurements to be performed at the property line of the parcel where the noise is generated. This property line location is unusual in my experience, as I have used it only when the source property desired to be conservative in their reporting of noise emissions to neighbors. In Chapter 3, Naperville imposes amplified noise limits on restaurants and taverns to being audible no more than 300 ft beyond the property line of the business, although this does not directly correlate with the amphitheater project.

Article 8 of the **Aurora** Code of Ordinances does not include a zoning-based decibel-level limit. The ordinance does limit "loudspeakers, amplifiers, public address systems, and similar devices" except when permitted during nighttime hours. No limit is apparently set during daytime hours.

The Village of **Schaumburg** Code of Ordinances limits noise to residentially-zoned receivers to a nighttime limit of 55 dBA, as in Oswego. No restriction is in place during daytime hours. Noise from loudspeakers is only limited when the intent is advertising. No restrictions are placed on public performances.

# The V8 loudspeaker

## The Vi8 loudspeaker

### V8/Vi8 loudspeaker

The V8 and Vi8 are line array loudspeakers, the Vi8 Loudspeaker is the installation version of the V8 Loudspeaker. They are 3-way passive designs featuring two 10" LF drivers, one hornloaded 8" MF driver and two 1.4" exit HF compression drivers with 2.5" voicecoils mounted to a dedicated waveshaping device. The symmetrical dipolar arrangement of the neodymium LF drivers around the centrally mounted coaxial MF and HF components allows a smooth overlap of the adjacent frequency bands in the crossover design. This results in an exceptional 80° horizontal constant directivity dispersion control nominally being maintained down to 250 Hz.

The mechanical and acoustical design enables flown vertical arrays of up to twenty four loudspeakers to be suspended using vertical splay angles between 0° to 14° with a 1° resolution. It can be used in columns of purely V8 or Vi8 loudspeakers or combined with V12/Vi12s and/or with V-SUB/Vi-SUBs.

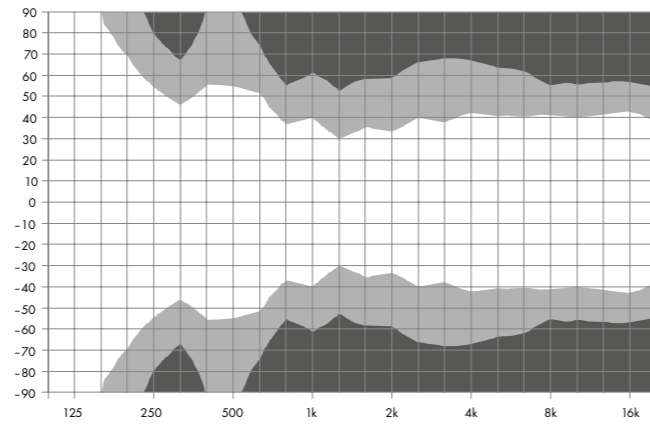

The cabinet is constructed from marine plywood and has an impact and weather protected PCP (Polyurea Cabinet Protection) finish. The front of the loudspeaker cabinet is protected by a rigid metal grill backed by an acoustically transparent foam. Each side panel of the V8 cabinet incorporates a handle while two additional recessed grips are provided at the rear bottom of both the V8 and Vi8.

### V12/Vi12 loudspeaker

The V12 and Vi12 are line array loudspeakers, the Vi12 loudspeaker is the installation version of the V12 loudspeaker. They are 3-way passive designs featuring two 10" LF drivers, one hornloaded 8" MF driver and two 1.4" exit HF compression drivers with 2.5" voicecoils mounted to a dedicated waveshaping device. The symmetrical dipolar arrangement of the neodymium LF drivers around the centrally mounted coaxial MF and HF components allows a smooth overlap of the adjacent frequency bands in the crossover design. # The J subwoofer

## J subwoofer

The J-SUB is the subwoofer for the J-Series. It is an actively driven 2-way bass-reflex design housing three long excursion neodymium 18" drivers, two drivers face to the front and one driver to the rear. The cardioid dispersion pattern resulting from this arrangement avoids unwanted energy behind the system that greatly reduces the excitation of the reverberant field at low frequencies and provides the greatest accuracy of low frequency reproduction.

The J subwoofer can be used to supplement J8 and J12 loudspeakers in various combinations, ground stacked or flown, either integrated on top of a J8/J12 array or as a separate column. Cabinets are mechanically connected using the rigging links on both sides of the cabinet front, and with a central rigging link at the rear of the cabinet.

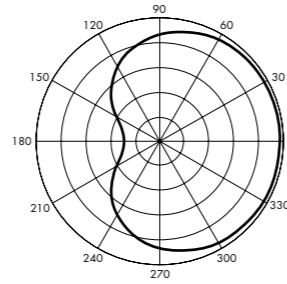

The J-SUB cabinet is constructed from marine plywood and has an impact and weather protected PCP (Polyurea Cabinet Protection) finish. The front and rear of the loudspeaker cabinet are protected by a rigid metal grill and the side panels incorporate eight handles. Four 100 mm wheels are mounted at the rear.

# The J-INFRA subwoofer

## J-INFRA subwoofer

The J-INFRA is the INFRA subwoofer for the J-Series. It is an actively driven 2-way bass-reflex design and extends the frequency response of a J-Series system down to 27 Hz.

It has two bass-reflex chambers containing three 21" drivers, two facing forward and one facing backwards. The cardioid dispersion pattern resulting from this arrangement avoids unwanted energy behind the system that greatly reduces the excitation of the reverberant field at low frequencies and provides the highest accuracy of low frequency reproduction.

The J-INFRA can only be used in ground stacked configurations in conventional left/right setups as well as arranged in a subwoofer array.

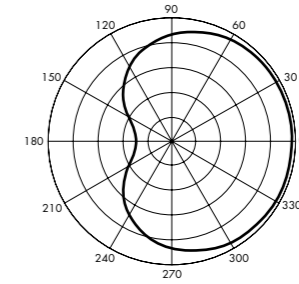

The J-INFRA cabinet is constructed from marine plywood and has an impact and weather protected PCP (Polyurea Cabinet Protection) finish. The front and rear of the loudspeaker cabinet are protected by a rigid metal grill and the side panels incorporate eight handles. Four 100 mm wheels are mounted at the rear.

# The 12S and 12S-D loudspeakers

## 12S/12S-D loudspeaker

The biaxial 12S/12S-D are high performance 2-way loudspeakers employing a single 12" driver in a bass-reflex enclosure and different HF sections for a wide range of installed sound applications. Both versions are lightweight passive designs using neodymium drivers and large constant directivity horns for accurate pattern control. The 12S/12S-D are single box solutions providing rotatable dispersion characteristics of 75° x 50° and 110° x 55° respectively.

With their extended frequency response from 48 Hz to 18 kHz both versions can be used as full range systems and can also be supplemented by different subwoofers of the xS-Series.

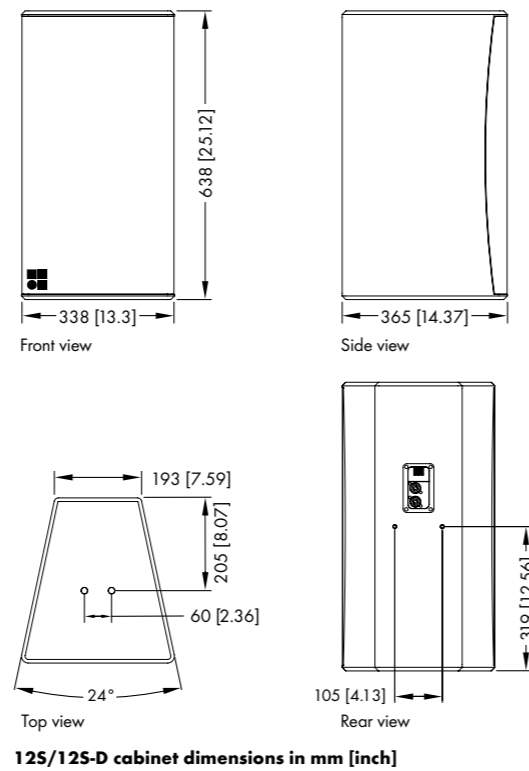

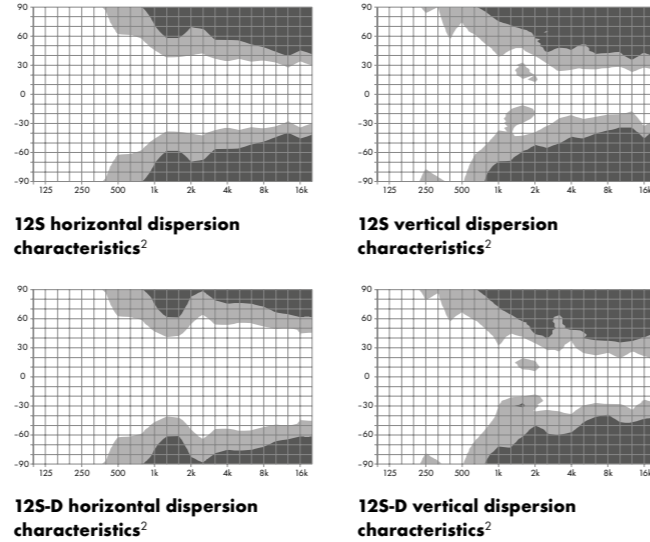

The loudspeaker cabinets are constructed from marine plywood with an impact resistant black paint finish. The front of the loudspeaker cabinets are protected by a rigid metal grill backed by an acoustically transparent foam. The top and bottom panels incorporate a pair of M10 threaded inserts, whilst the rear panel incorporates two M8 threaded inserts. The loudspeakers are Ball Impact Resistant according to DIN 18032-3 for sports and multipurpose halls.

# The 24S and 24S-D loudspeakers

## DELAY LOUDSPEAKERS

## 24S/24S-D loudspeaker

The 24S/24S-D are high performance full range 2-way passive loudspeakers housing two 12" drivers in a bass-reflex enclosure with a 1.4" exit compression driver mounted onto a large rotatable CD horn. The 24S and 24S-D differ in dispersion characteristics due to different HF sections, providing 75° x 45° and 110° x 45° (h x v) respectively, and are suitable for a wide range of permanently installed applications. The dipolar arrangement of the 12" drivers results in directivity control down to approximately 500 Hz in the same plane as the dipole. The specially designed ports with optimized flow characteristics and a large cabinet volume provide a significant low frequency reproduction.

With a frequency response extending from 55 Hz to 18 kHz, the 24S and 24S-D can be used as a stand-alone, full range system, or supplemented with d&b subwoofers. They can be ground stacked, flown individually, or flown in a cluster. The HF horn can be rotated by 90° to enable horizontal orientation.

The loudspeaker cabinets are constructed from marine plywood, and have an impact resistant paint finish. The front of the loudspeaker cabinets are protected by a rigid metal grill. The top, bottom and both side panels each incorporate a pair of M10 threaded inserts for attaching d&b rigging hardware.

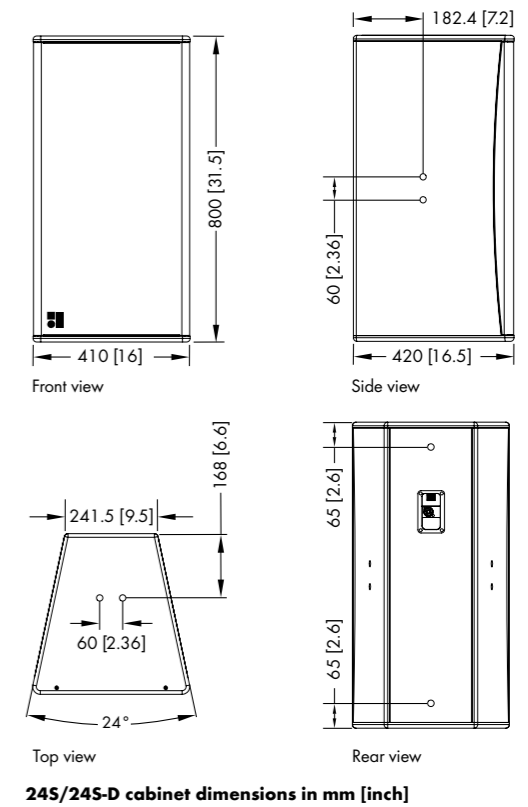

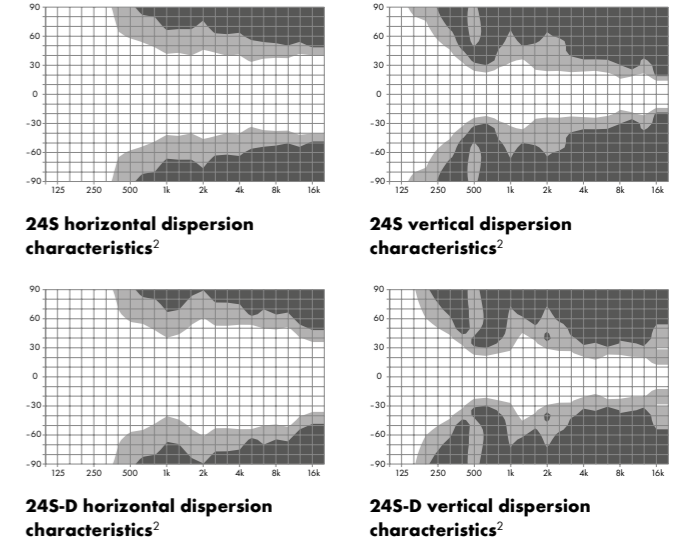

The loudspeakers are Ball Impact Resistant according to DIN 18032-3 for sports and multipurpose halls.

## E4 loudspeaker

The E4 is a lightweight 2-way passive loudspeaker using a neodymium LF driver and a coaxially mounted wide dispersion dome tweeter. The E4's coaxial design employs a 4" driver in a highly compact sealed enclosure and offers a wide symmetrical dispersion pattern in the horizontal and vertical plane while the cabinet may be mounted in either attitude.

It can be used stand-alone or supplemented by different subwoofers from the E-Series.

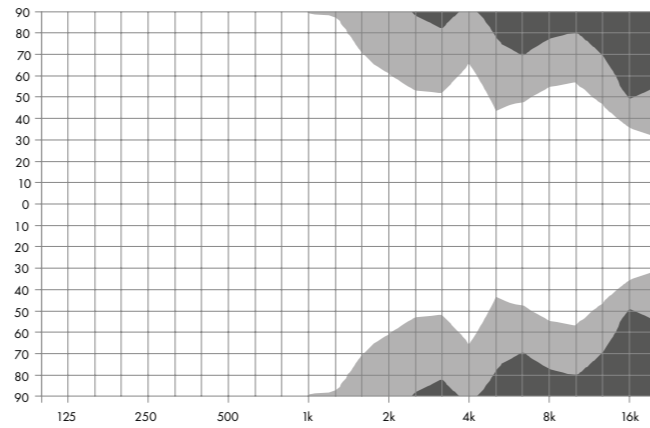

The enclosure is injection moulded with an impact resistant paint finish. The front of the loudspeaker cabinet is protected by a rigid metal grill and incorporated into the rear panel is an M10 threaded insert to accept the ball joint adapter.
